STANDARD

INSTRUCTOR: MATT DONATO

VEHICLE VOLTAGE CONTROL SYSTEMS

CLASS DESCRIPTION:

To improve fuel economy, a great amount of attention has been given to the changing electrical loads on the engine and other major systems. A variety of sensors and strategies have been employed to reduce and manage this load and power control modules have been implemented. This has made diagnosing electrical faults more difficult at times.

KEY LEARNING OBJECTIVES:

- Understand and be able to diagnose modern charging systems
- Understand how electrical power is generated and managed by different manufacturers
- Diagnose power moding faults
- Locate difficult parasitic draw faults
- Be able to diagnose offline modules due to external problems
